

Task 2 : Google Dorking

To understand the different filters offered by Google. I use the pentestgpt.ai. It's a cool Ai for pentesters to ask about penetration and cybersecurity related topics. I'm sure many of you knows about this one.

DISCLAIMER: I'm just a curious boy ☺

I was curious to know more about people who are associated with my college. Which includes my fellow classmates too.

My objective was simple just to surf and understand dorking. But during it I immediately thought of why not dork a person i knew.

intext: site: filetype: these filters found the occurrence of their name in the pdf(s) and LinkedIn profile. From there I got their github and social media handles.

NOTE: i didnt even talked to him/her that much before but knew his/her name lol. 😊

And found that he/her is a reading person, diving in the field of AI/ML but also exploring other domains. and he/she declared that he/she is an ambivert, etc etc..

Ik this is also called stalking but lol who knows. 😂

It's kinda scary to know that this much information about a person is exposed online.

Anyways excited for the next task! See ya!
