

# TASK:1

I hacked a fake banks account through “Try hack me”. As a beginner the site suggested me to do this. The 1st task know about what is offensive security. As the 2nd task I have used a command line application called gobuster.

```
gobuster -u http://fakebank.thm -w wordlist.txt dir
```

This is the code I’ve used. -u is used to state the website we’re scanning and -w takes a list of words to iterate through the hidden pages.

Screenshots;

```
ubuntu@tryhackme: ~/Desktop
File Edit View Search Terminal Help
ubuntu@tryhackme:~/Desktop$ gobuster -u http://fakebank.thm -w wordlist.txt dir
