

Pickle Rick CTF

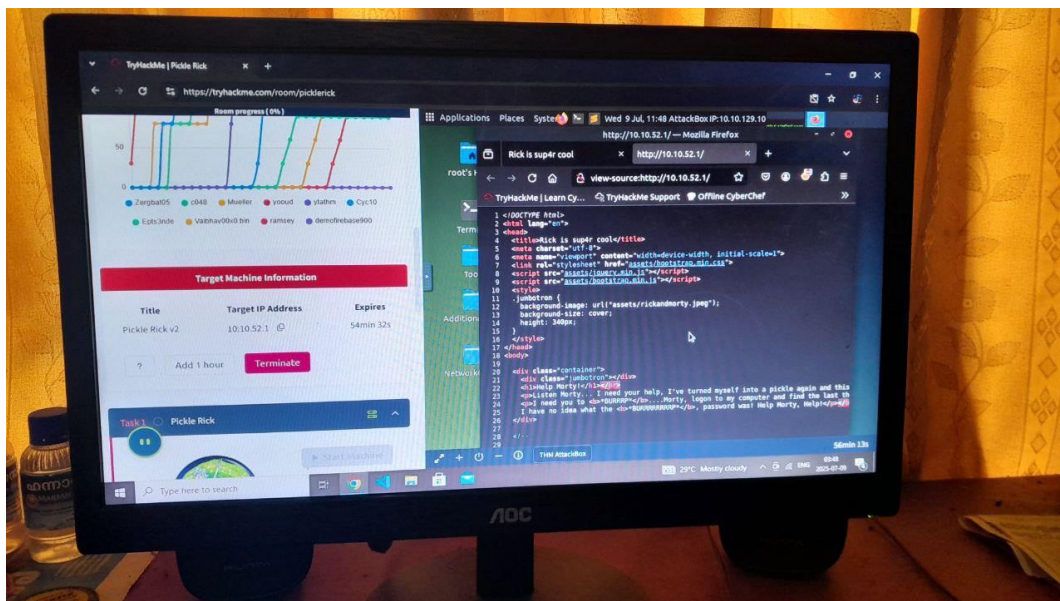

Name: Anson Shaji

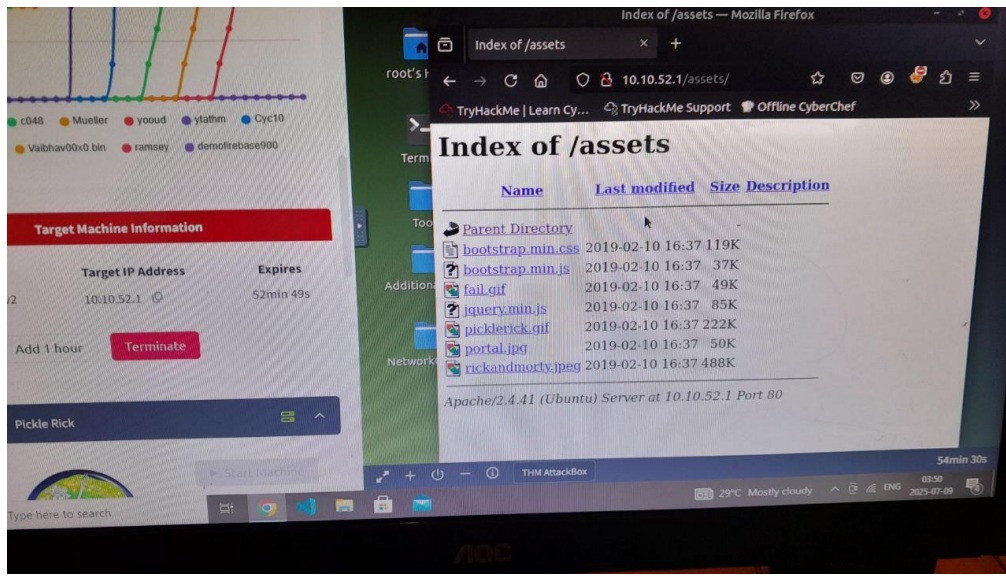

Setup :

- Tryhackme.com ctf room called pickle rick
- Tryhackme inbuilt Attack box

Step 1:

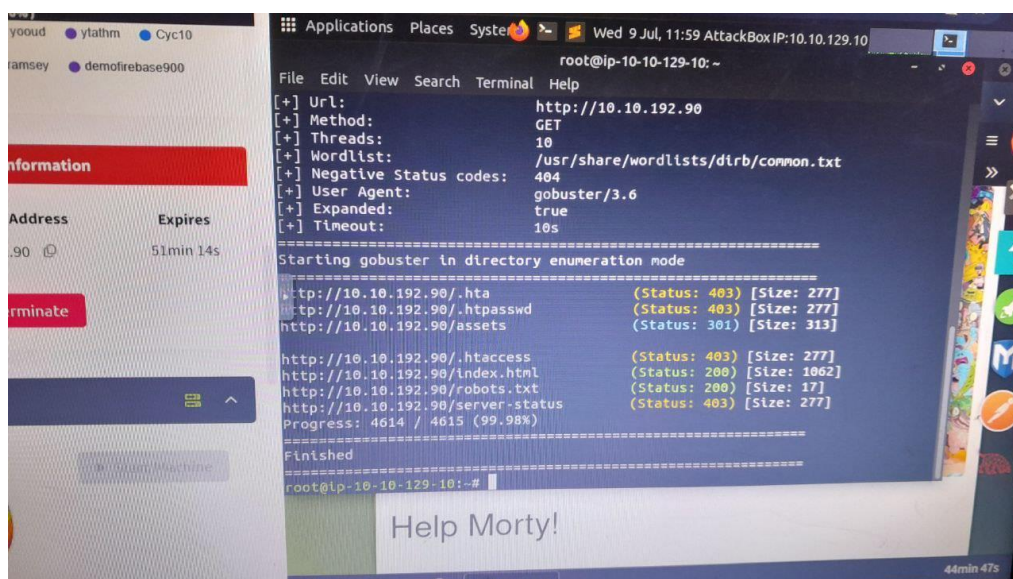

- Accessing the machine by pasting the url (ip) in the attack box browser
- Next I take a look at source code of the website
- Find a directory called asset and a username

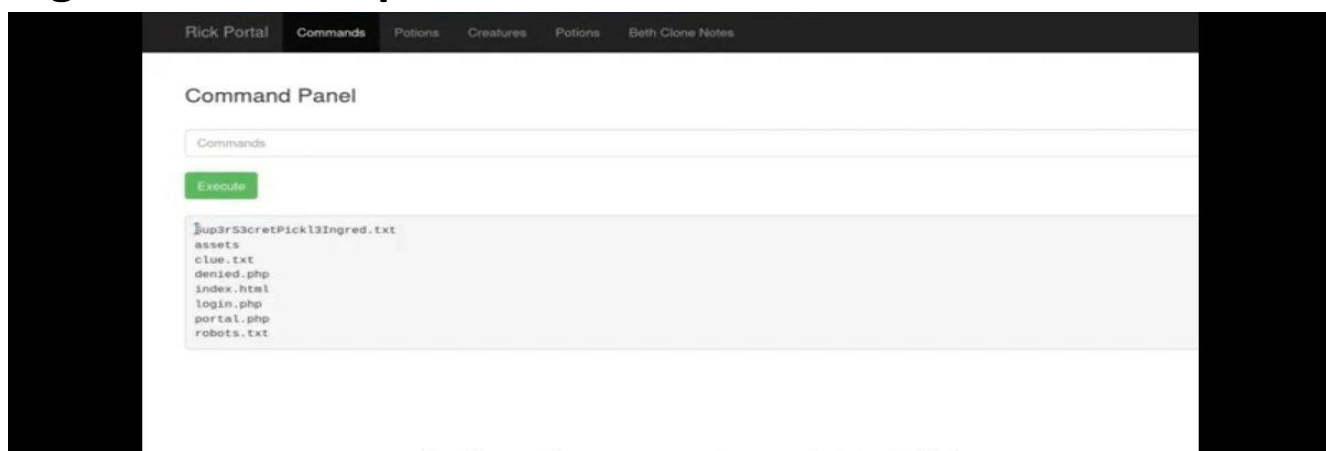

Step 2:

- Since we got a username I search for login page then I got a page called login.php
- I use a tool called gobuster to find hidden directories using an in build wordlist
- I found a robot.txt file which contain password
- I log into the login.php and found a command session

Step 3

- On the command panel I type “ls” command and hit enter it shows files on my current directory called “html”
- Here I got a text file I use “cat” to read but it is blocked so I use “less” command and I got my first ingredient to help Rick to back into human

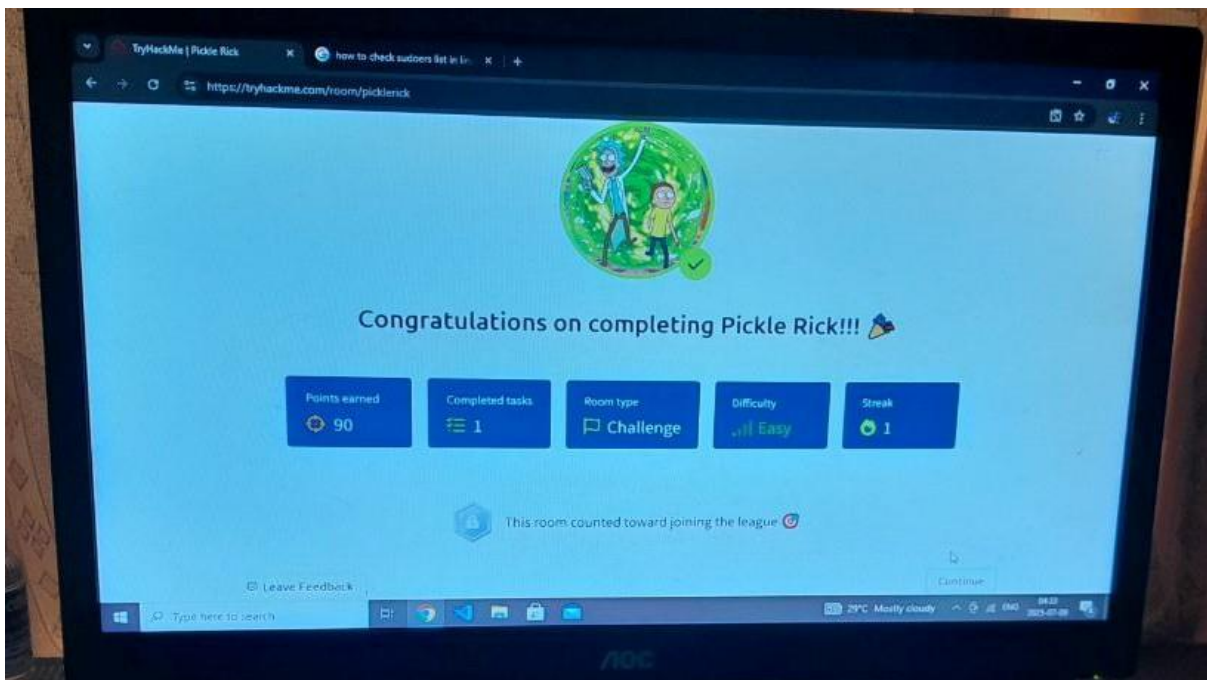

Step 4:

- Then I “ls /” to check different directories to find ingredients
- Then I entered into home directory where I found a file called rick under rick I found a file called “second ingredient “
- I type “less /home/rick/”second ingredients” then I found the second ingredient

Step 5:

- Then from the last and third question I found that I must check on root directory
- I use “sudo – ” to check root permission and found that without password I can use sudo
- Then I type “sudo ls/root/” I found a file called “3rd.txt”
- So I use “sudo less/root/3rd.txt” then I found the last ingredient to bring rick back to human

* (AT some point my screen shot key was not working that why I add images I took using my phone was provided.)
